PAYS FOR ITSELF · AI SOLUTIONS CATALOG · ADAM

Know what your database migration will save before you start.

Your legacy databases cost more every year, and the migration keeps slipping because nobody can say what will break or what it will save.

Trusted by **TaxAudit, Horrocks, Battelle Energy Alliance, Navy Mutual Aid Association** and **Allmoxy** · **89+ NPS, measured every year**

ADAM is 11:59's Agentic Database Analysis and Migration solution. It analyzes your current database, shows compatibility, risk and effort, models the cost on AWS, then **runs and validates the migration** with AWS-native services. Under **11:59 Operate**, we run the new environment for you.

HOW IT WORKS

From analysis to a validated migration, in one tool

1. Analyze
Reads your current database and checks every table, view, procedure and trigger against the target AWS database.

2. Show the work
Compatibility, risk and level of effort, with the details and the raw data behind every finding.

3. Model the cost
Compares what the database costs now with what it would cost on AWS managed services.

4. Migrate
Starts and tracks the migration with AWS Database Migration Service, through to completion.

5. Validate
Compares source and target data after the move, so nothing is lost on the way.

6. Ask
Answers plain-language questions about either database, its findings and its trade-offs.

MORE THAN AN ASSESSMENT

Assessment tools stop at a report. ADAM moves the data.

	TYPICAL ASSESSMENT TOOLS	ADAM
What you get	A compatibility report and an estimate	Analysis, cost model, migration and validation in one tool
Cost	A separate spreadsheet exercise	Total cost of ownership modeled for AWS managed services
Target	Often like-for-like, lift and shift	Modern AWS databases: Amazon Aurora, Amazon RDS, Aurora DSQL and more
After the move	Manual spot checks	Source and target compared automatically

Your team stays in control: ADAM recommends, and your engineers approve every change before it runs.

BUILT ON AWS

Runs in your AWS account

Agentic AI
Amazon Bedrock and Strands Agents for analysis, questions and decision support.

AWS-native migration
AWS Database Migration Service and Amazon EventBridge run and track the move.

Your environment
Your AWS account, your identity provider and your network rules.

Audit record
Every finding, decision and migration step is logged.

BUYING

How you buy it

	WHAT IT IS	HOW IT'S PRICED
AI Rapid Scan	Your databases, workloads and target, ending with a fixed migration quote	Fixed fee, scoped and quoted before we start
Migration	ADAM-led migration of the databases in scope, validated on your real data	Fixed fee, quoted before you order
11:59 Operate	We run and tune the new environment, with a monthly report	Monthly or annual, tiered
AWS funding	AWS migration funding programs may offset part of the cost	Confirmed during scoping

WHY 11:59

Cloud work that pays for itself

- **$1M+ average annual savings per enterprise client.** 450% average return on investment across AI and cloud engagements.
- **3x faster to production with a proven solution vs. a custom build.** Every AI and cloud project delivered since 2022, and 89+ NPS, measured every year.
- **Safe to scale.** Every agent has an owner, tests and an audit trail, and runs in your own AWS account. AWS Advanced Tier Partner with the AWS Generative AI Competency.

> *The savings first, then the move, and proof that every row arrived.*

Next step: an AI Rapid Scan for your databases

We look at the databases you want to move, run ADAM's analysis, and return the savings, the risks and a fixed migration quote. Scoped to the effort and quoted before we start. See it working in the AI Lab at 1159.ai.

Fixed scope and fee, quoted before you start. 11:59 services are also listed on **AWS Marketplace**, and AWS funding programs may offset part of the cost.
