11:59
ready for tomorrow

COMMERCIAL

USEFUL · AI SOLUTIONS CATALOG

Skip the pilot. Start with what already works.

You don't need another pilot, and you don't have a team to maintain one. You need the document intake handled, the exception queue worked, the knowledge findable and the legacy database retired.

Trusted by **TaxAudit, Horrocks, Battelle Energy Alliance, Navy Mutual Aid Association** and **Allmoxy** · **89+ NPS, measured every year**

> The **AI Solutions Catalog** is a set of AI solutions built in production for real clients, deployed into your own cloud, configured to your data and run for you under **11:59 Operate**. Deployment is a fixed fee, quoted before you order, so the cost of going live is a known number.

THE CATALOG

Solutions firms start with

SOLUTION	WHAT IT DOES
IDP++ document intake	Client documents, claims, applications and correspondence classified, extracted and validated at volume, with an audit trail. In production at a commercial tax-services firm.
Knowledge search	Answers with citations across your policies, contracts, manuals and files, so staff stop hunting.
ERP exception queues	Agents that work invoice and transaction exceptions: researched, resolved or escalated with a record. First deployments in progress.
Database migration (ADAM)	Assesses compatibility, risk and effort, then moves legacy or expensive databases to managed services on AWS.

HOW IT WORKS

Two steps done before you order, three done with you

DONE BEFORE YOU ORDER

Proven in production
Built for a real client
Edge cases handled
Test set included

→

Security pack
Architecture reviewed
Audit trail built in
Data stays in your cloud

DONE WITH YOU

→

Deploy
Into your AWS or Azure environment, on your identity

→

Configure
Connect your data; tune to your forms, rules and queues

→

Go live
Validated on your real cases; staff trained on the job

Then 11:59 Operate keeps it current, tuned and supported. You own the deployment, the data and the option to run it yourselves.

WHY IT'S FASTER

Starting from scratch is the slow way

BUILD IT YOURSELF	DEPLOY FROM THE CATALOG
A long build before anything reaches production	A working deployment, scoped and quoted up front
Success depends on who you could hire	Success depends on your data, the part you control
Security review from a blank page	A reference architecture already reviewed by regulated clients
Someone has to maintain it	11:59 Operate keeps it current and tuned

OWNERSHIP

We run it. You own it.

- **Pre-built and maintained by 11:59.** the agents and pipelines, the test harness, governance and audit trail, and the security reference architecture
- **Configured to you.** connections to your systems, your document types and rules, your approval thresholds, your identity and roles
- **Owned by you.** the deployment in your cloud, your data (which never leaves your environment), the outputs and audit record, and the option to run it yourselves

BUYING

How you buy it

	WHAT IT IS	HOW IT'S PRICED
AI Rapid Scan	Your backlogs, systems and data, ending with the solution to deploy first and its quote	Fixed fee, scoped and quoted before we start
Deployment	Deploy, connect, configure, validate on your real cases, train your team	Fixed fee per solution
11:59 Operate	We run the solution in your cloud: updates, tuning, monitoring, support	Monthly or annual per solution, by volume
Catalog bundle	Two or more solutions sharing knowledge search, under one subscription	Subscription discount

> *Buy the solved problems, have them run for you, and build only what's yours.*

Next step: an AI Rapid Scan

A short, fixed-scope look at one backlog, your cloud and your data sources. You leave with the solution to deploy first and a fixed deployment quote.

Fixed scope and fee, quoted before you start. 11:59 services are also listed on **AWS Marketplace**, and AWS funding programs may offset part of the cost.
