11:59
ready for tomorrow

STATE OF CALIFORNIA

SAFE · STANDARDIZED AI ADOPTION · COMPANY BRAIN

See how your department actually connects, and ask it questions.

The answer to "who has done this before?" is spread across org charts, project lists and inboxes, so staff ask around and wait.

300+ projects for the State of California · 23+ years of delivery for California departments

The **11:59 company brain** is a knowledge graph that pulls scattered data into one map of people, teams, topics and projects. Ask in plain language and get **cited answers and the connections behind them**, with role-based security, inside your own AWS account. It also gives every AI tool and agent one trusted source.

HOW IT WORKS

Scattered data in, one map you can ask questions of

1. Connect
Brings in data from your systems, documents and approved outside sources, in real time where needed.

2. Harmonize
Cleans and aligns different formats, so the same person, team or topic is one record.

3. Map
Builds a semantic knowledge graph of people, teams, topics, projects and how they connect.

4. Ask
Plain-language search with retrieval-augmented generation returns answers with their sources.

5. Drill in
Click any result to see its connections: who worked on it, with whom, and where.

6. Secure
Role-based access controls decide who can see which parts of the graph.

WHAT IT ANSWERS

Questions that take days of asking around today

QUESTION	WHAT THE COMPANY BRAIN SHOWS
Who has done this before?	The people and teams connected to a topic, with the work behind each link
Where does this work overlap?	Projects and groups working on the same thing without knowing it
What do we know about this?	Cited answers drawn from your own data and documents
What should our AI tools trust?	One governed, structured source for assistants and agents to draw on

People decide what it means: the graph shows the connections; your staff decide what to do with them.

SECURITY

Runs where your data already lives

Your environment
Your own AWS account, identity provider and retention rules.

Role-based access
Each user sees only the parts of the graph they are cleared for.

IN PRACTICE

Built for a federal research laboratory

- **The challenge.** Scattered outside technical data in many formats, a need to scale, and sensitive research to protect.
- **What 11:59 built.** A GenAI pilot that combined large language models, knowledge and network graphs, data engineering and real-time integrations, with role-based security and RAG search.
- **What happened next.** The laboratory's Chief Data Officer and leadership began planning a production version across their groups.

BUYING

How you buy it

	WHAT IT IS	HOW IT'S PRICED
AI Rapid Scan	Your data sources, questions and users, ending with a fixed build quote	Fixed fee, scoped and quoted before we start
Pilot to production	Build on your data, validate with your users, then scale across programs	Fixed fee per phase, quoted before you order
11:59 Operate	We keep the company brain current and running, with a monthly report	Monthly or annual, tiered

WHY 11:59

Part of Standardized AI Adoption

- **A trusted base for every AI tool.** The company brain becomes the governed knowledge your assistants and agents use, under one standard, whether they run on open-weight or closed models.
- **Every AI and cloud project delivered since 2022.** 89+ NPS, measured every year.
- **Governed like government.** 23+ years of State of California work; AWS Advanced Tier Partner with the AWS Generative AI Competency.

> *One map of who knows what, across the department.*

Next step: an AI Rapid Scan for your knowledge

We look at your data sources and the questions your people ask most, and return a fixed quote to build your first company brain. Scoped to the effort and quoted before we start. See the knowledge graph working in the AI Lab at 1159.ai.

Contract through **CMAS 3-24-01-1044** or the **TDDC MSA #5-22-70-25-189** as a SOW under an existing agreement.
11:59 software is also available through the **California Software Licensing Program (SLP)**.
