11:59
ready for tomorrow

COMMERCIAL

SAFE · STANDARDIZED AI ADOPTION · RESCUE ENGINEERS

The pilots your people built, taken to production.

Someone on your team built something that works: an agent, a workflow, a script that saves hours every week. It runs on one person's account, on exports and copy and paste, and nobody else can see it or support it.

Trusted by **TaxAudit, Horrocks, Battelle Energy Alliance, Navy Mutual Aid Association** and **Allmoxy** · **89+ NPS, measured every year**

11:59's **rescue engineers** find what your people have already built, choose with you what is worth keeping, and rebuild the best of it with identity, permissions, a connection to your systems and a named owner. **Then they take it to production.** The people who built it stay involved, and the credit stays with them.

HOW IT WORKS

From someone's desktop to production

1. Find
An inventory of the agents, custom GPTs, scripts and workflows in use, and who depends on each one.

2. Sort
By value and by risk: what touches customer data, money or the systems you run on.

3. Decide with you
Keep as is, rebuild or retire. Nothing is switched off without a plan for the work it does.

4. Rebuild
Identity, permissions, a proper connection to your systems of record, tests and an audit trail.

5. Promote
Pilot, then assisted, then production, each step after a security review and its owner's sign-off.

6. Hand over
To a named owner, with a test set the team can re-run. 11:59 Operate runs it if you want us to.

WHAT CHANGES

Same tool, ready for production

ON SOMEONE'S DESKTOP	IN PRODUCTION
Runs on one person's account	Runs under your identity provider and permissions
Copies data out by export	Connected to your systems of record
Nobody can see what it does	Every action logged
Stops when its builder moves on	A named owner, documentation and a test set the team can re-run
IT finds out after the fact	Reviewed before it touches sensitive data

PILOT TO PRODUCTION

How a pilot earns production

Pilot → Assisted → In production

Each tool moves up only when it earns it: a security review before it touches sensitive data, and its owner's sign-off before it runs on its own.

WHERE THEY FIT

Rescue engineers and forward deployed specialists

	RESCUE ENGINEERS	FORWARD DEPLOYED SPECIALISTS
Start from	What your people already built	A new need a leader defined
Best when	Good tools are stuck on desktops	A department needs to move onto agents
Result	Pilots in production, with their builders credited	New agents, one department at a time

BUYING

How you buy it

	WHAT IT IS	HOW IT'S PRICED
AI Rapid Scan	An inventory of what your people have built, the first pilot to take to production and its quote	Fixed fee, scoped and quoted before we start
Onboarding Assessment	Every agent you have today, including ones a contractor left behind, reviewed and given a verdict: take on, fix or retire	Fixed fee, quoted before we start
Standardized AI Adoption	Rescue engineers as part of the full program, alongside the company brain and forward deployed specialists	Flat monthly fee for the term
11:59 Operate	We run what the rescue engineers took to production, with a monthly report	Monthly or annual, tiered

AWS funding programs may offset part of the cost; we check eligibility during scoping.

WHY 11:59

Recognize the builders. Keep the work.

- **Credit stays with the builder.** The people who started it stay involved; the goal is their tool in production, not a shutdown.
- **We run what we build.** Whatever the rescue engineers take to production can join 11:59 Operate, with an owner and a monthly report.
- **Safe to scale.** Every agent has an owner, tests and an audit trail, and runs in your own cloud. AWS Advanced Tier Partner with the AWS Generative AI Competency.

> *Your best pilot in production. Then the next one.*

Next step: an AI Rapid Scan

We inventory what your people have built, pick the first pilot to take to production and quote it. Scoped to the effort and quoted before we start.
