11:59
ready for tomorrow

STATE OF CALIFORNIA

SAFE · STANDARDIZED AI ADOPTION · RESCUE ENGINEERS

The tools your staff built, taken to production safely.

Staff across your programs have built tools that work: agents, workflows and scripts that save hours every week. Most run on one person's account, outside ITSD's view, and stop when that person moves on.

300+ projects for the State of California · 23+ years of delivery for California departments

> 11:59's **rescue engineers** find what staff have already built, choose with you what is worth keeping, and rebuild the best of it with identity, permissions, a connection to your systems and a named owner. **Then they take it to production.** The people who built it stay involved, and the credit stays with them.

HOW IT WORKS

From someone's desktop to production

1. Find
An inventory of the agents, custom GPTs, scripts and workflows in use, and who depends on each one.

2. Sort
By value and by risk: what touches constituent data, money or the systems you run on.

3. Decide with you
Keep as is, rebuild or retire. Nothing is switched off without a plan for the work it does.

4. Rebuild
Identity, permissions, a proper connection to your systems of record, tests and an audit trail.

5. Promote
Pilot, then assisted, then production, each step after a security review and its owner's sign-off.

6. Hand over
To a named owner, with a test set the team can re-run. 11:59 Operate runs it if you want us to.

WHAT CHANGES

Same tool, ready for production

ON SOMEONE'S DESKTOP	IN PRODUCTION
Runs on one person's account	Runs under your identity provider and permissions
Copies data out by export	Connected to your systems of record
Nobody can see what it does	Every action logged
Stops when its builder moves on	A named owner, documentation and a test set the team can re-run
ITSD finds out after the fact	Reviewed before it touches sensitive data

PILOT TO PRODUCTION

How a pilot earns production

Pilot → Assisted → In production

Each tool moves up only when it earns it: a security review before it touches sensitive data, and its owner's sign-off before it runs on its own.

WHERE THEY FIT

Rescue engineers and forward deployed specialists

	RESCUE ENGINEERS	FORWARD DEPLOYED SPECIALISTS
Start from	What staff already built	A new need a leader defined
Best when	Good tools are stuck on desktops	A program needs to move onto agents
Result	Pilots in production, with their builders credited	New agents, one program at a time

BUYING

How you buy it

	WHAT IT IS	HOW IT'S PRICED
AI Rapid Scan	An inventory of what staff have built, the first pilot to take to production and its quote	Fixed fee, scoped and quoted before we start
Onboarding Assessment	Every staff- and vendor-built agent reviewed and given a verdict: take on, fix or retire	Fixed fee, quoted before we start
Standardized AI Adoption	Rescue engineers as part of the full program, alongside the company brain and forward deployed specialists	Flat monthly fee for the term
11:59 Operate	We run what the rescue engineers took to production, with a monthly report	Monthly or annual, tiered

WHY 11:59

Recognize the builders. Keep the work.

- **Built with a client, not in a workshop.** The role comes from an enterprise AI enablement engagement with a California state department.
- **Credit stays with the builder.** The people who started it stay involved; the goal is their tool in production, not a shutdown.
- **We run what we build.** Whatever the rescue engineers take to production can join 11:59 Operate, with an owner and a monthly report.
- **Governed like government.** 23+ years of State of California work; AWS Advanced Tier Partner with the AWS Generative AI Competency.

> *The tools staff built, under one standard your auditors can see.*

Next step: an AI Rapid Scan

We inventory what staff have built, pick the first pilot to take to production and quote it. Scoped to the effort and quoted before we start.

Contract through **CMAS 3-24-01-1044** or the **TDDC MSA #5-22-70-25-189** as a SOW under an existing agreement.
11:59 software is also available through the **California Software Licensing Program (SLP)**.
